Iagona opens its new 3,000 m² logistics centre in Lieusaint and reaffirms its European presence

Lieusaint, September 15, 2026 – Iagona officially opened its new 3,000 sq. m. logistics facility in Lieusaint, in the Île-de-France region, on Tuesday, September 15.

Guided tours, equipment presentations and conversations with employees brought the day to life, making it a key opportunity to strengthen connections with Iagona Group employees.

A new chapter for the Iagona Group

With this new facility, the Iagona Group is taking another major step in its development and reinforcing its ambitions across Europe.

Located in Lieusaint, this new 3,000 sq. m. facility brings the Group's existing platforms together under one roof. It strengthens its storage, equipment preparation and management capabilities, while also expanding the dedicated space for after-sales service and the repair of digital equipment.

This new facility is part of a broader strategy to structure the Group's operations and support the growing volume of projects delivered for its customers, while maintaining the level of proximity and responsiveness that has always been part of Iagona's DNA.

A dedicated facility for storage, logistics and staging

The new Lieusaint facility goes beyond equipment storage and logistics. It also incorporates staging operations, enabling equipment to be repaired and solutions to be prepared before they are deployed in the field. In 2025, the Group repaired and returned more than 7,000 digital devices to service. This investment aims to further increase the Group's capacity to refurbish and extend the lifespan of its equipment, in line with its commitments under its EcoVadis roadmap.

By centralising part of these operations within a dedicated facility, the Group is strengthening its expertise in services while also enhancing its ability to manage deployments across a broader geographical area.

An organisation designed to support the Group's growing European presence

This new facility in France complements the capabilities developed by Iagona in the United Kingdom and contributes to building a more integrated European organisation.

Following the relocation of its UK operations to Manchester in 2025, Iagona is continuing to strengthen and structure its network, enhancing its ability to support customers beyond the French market.

This development reflects the Group's ambition to build an operational organisation capable of addressing the demands of European-scale projects, while maintaining close relationships with its customers and partners.

With expertise spanning customer journey digitalisation, digital signage, interactive kiosks and self-service solutions, point-of-sale terminals and connected solutions, Iagona now has enhanced logistics capabilities to support the deployment of its solutions across Europe.

About the Iagona Group

Iagona is a European company specialising in software and digital solutions designed to enhance customer and user experiences. With more than 35 years of expertise, Iagona supports public and private organisations in their digital transformation by designing and deploying innovative, connected and scalable solutions.

Its proprietary Neoscreen software suite enables content to be displayed across all types of screens, provides remote control of content schedules and integrates contextual data to deliver more dynamic and measurable communications.

Iagona's solutions cover a wide range of applications, including digital signage, the digitalisation of physical spaces, interactive terminals and kiosks, connected lockers and point-of-sale terminals.
